

| AIR FILTRATION CAPS

Better protection heavy weather.

The filters are mounted in a horizontal position, with a mesh on the bottom against incoming snow to better protect the filters against heavy weather like wind, rain and snow. As for all of our products, attention has gone into the design of the caps so that they are easy to install and transport.

Container frame

With the use of Kontena's container frames, installation is super easy. A 20ft container can hold 12 filtration caps. Each cap holds 6 panel filters of size 24x24x10 inch.

Aluminium caps

The caps are stackable for shipment. The use of aluminum ensures light caps and can be mounted without forklifts. Retrofitting the caps into a standard Kontena M3 or HPC/GPU container is possible.
